

The Course at a Glance

Four Lenses in every chapter: Learning Analytics • Project Management • IoT • Cybersecurity

** Chapters 1–10 and 17–32 belong to Data Science, taught here for the first time. Chapters 11–16 (Part III, dashed outline) belong to Machine Learning Fall 2026, a prerequisite taken immediately before this course: the algorithms and evaluation machinery are recapped, not taught from zero, and only feature engineering and anomaly detection are genuinely new. Part III now finishes in Week 9 of the schedule, one week clear of the midterm (Week 10), so no Machine-Learning-overlapping topic is left unfinished when that exam is set.*
