

1. Do I have an address?
`ipconfig /all`

fails → **DHCP or layer 2**
Chapters 20, 14

2. Ping my own gateway

fails → **local segment**
VLAN, cable, ARP, wireless assoc.

3. Ping something remote
by IP address

fails → **routing, NAT or ACL**
Chapters 15, 22, 24

4. Ping the same thing
by name

5. It is not the network

By address, on purpose — it takes name resolution out of the question entirely.
